#### INTRODUCTION

The Fire Research Information Services (FRIS) started in 1971. It is a broad-based collection of over 25,000 fire research items, emphasizing the national and international report literature, geared toward the programmatic needs of the Center for Fire Research. FIREDOC is the on-line bibliographic database of this collection.

The FIREDOC Vocabulary List is now in its second edition. It reflects the FRIS holdings and the keywords are geared towards the needs of the users of this collection. The vocabulary was originally used to develop a small fire safety database for NASA/ASRDI (Aerospace Safety Research and Data Institute). A vocabulary list is a changing document, reflecting new research interests at the national and international levels. The printed version is intended to be useful for computerized searching and classification purposes, but it will not necessarily be identical with the FIREDOC vocabulary. The keywords in the database always will reflect new additions to the collection or shifts in the acceptance and/or usage of technical concepts.

To assist in the use of the List, we have expanded upon the symbol notations and chemical compounds. If you have any comments about the content or philosophy of the List, please contact the author.

#### SYMBOL NOTATION

The symbols which precede some of the words mean:

- \*USE = The user is referred to the preferred term indicated. The keyword with an asterisk (\*) is NOT used.
  - UF Used For. The term at the main entry is to be used for any keyword listed below this notation.
    - # = refer to the generic term. If appropriate, use a more specific keyword. However, the keyword may be used if it is the best one for the document.
  - RT = Related Term. The listed keyword(s) are conceptually different.
  - SA = See Also. The listed keyword(s) bear a close relationship to one another.
  - BT = Broader Term. The keyword(s) represent a generically broader class than the main keyword.
  - NT Narrower Term. It is the reverse meaning of 'BT'.

All keywords are in natural language format. On occasion it has been necessary to differentiate the subtle meanings of one or more keywords. This has been accomplished by embedding a descriptive term in parentheses.

#### CHEMICAL COMPOUNDS

Use the standard (Chemical Abstracts) compound name when the name is 33 characters or less.

When there is a common abbreviation, enter the abbreviation but USE the full name.

Use an abbreviated form of a compound name that exceeds 33 characters in length. If there is no standard abbreviation, submit the name to Chemical Abstracts where one may be provided.

#### ACKNOWLEDGEMENTS

Richard D. Peacock's contribution of writing the computer programs for this document is gratefully acknowledged. Without them, this document would not have been possible.
